

Elizabeth Friedland

Senior Frontend / Full-Stack Engineer

efriedla20852@gmail.com · efriedla.github.io · github.com/efriedla

SUMMARY

Senior frontend engineer with 9+ years delivering scalable React, TypeScript, Vue and Node.js applications across healthcare, financial services, government contractors and consumer environments. Experienced in GraphQL and REST integration, reusable component architecture, performance optimization, mentoring and AI-assisted development, with a strong focus on testing, privacy, accessibility and code quality.

CORE TECHNOLOGIES

Frontend: React, TypeScript, Next.js, SSR / SSG, Redux, React Native, Vue, Storybook, Chromatic, PWA, SASS, a11y
APIs, backend & data: GraphQL, REST, Node.js, NestJS, Prisma, Redis, PostgreSQL, MongoDB, Python, Java / Spring Boot, C#

Quality & delivery: Jest, Vitest, React Testing Library, CI/CD, AWS, Azure, Google Cloud, Docker, Datadog, New Relic, Contentful, Figma

EXPERIENCE

Frontend Engineer · TEG INC

Jan 2023 — Aug 2026

Public safety applications

- Built reusable React components for field teams working on unreliable connectivity, including form caching so submissions survived offline.
- Introduced Storybook to isolate legacy components and surface defects that only appeared in composition.
- Used Datadog to find and eliminate memory leaks and server-side defects, improving site performance by roughly 90% from load time to reliability.
- Designed an interactive case-network visualization that organised cases by severity so investigators could prioritise.

Full-Stack Engineer · Path

Feb 2022 — Dec 2022

Digital asset banking platform

- Designed GraphQL schemas and data integrations, then moved to a two-person backend team building NestJS REST APIs on Redis and Prisma.
- Working both sides of the API contract made integration and scalability problems visible early rather than at handoff.
- Mentored engineers through code review, pairing, and hands-on debugging.

Applications Engineer · RedZone

Aug 2021 — Jan 2022

Government sewer robotics platform

- Built the company's first cross-device PWA with React, local storage, REST APIs, Azure, C# and PostgreSQL.
- Built the control interface for sewer-inspection robots, which generated initial work orders directly from deployment findings.

Applications Engineer · MultiCare

Jun 2019 — Mar 2021

Multi-hospital healthcare system

- Delivered React and TypeScript information-sharing tools for clinical teams across several Pacific Northwest hospitals.
- Integrated Python, Java/Spring Boot, PostgreSQL and MongoDB services across AWS and Google Cloud.

Full-Stack Developer / Lead UX Designer · Fonte Coffee Roaster

Feb 2018 — Feb 2019

Seattle, WA

- Designed, built and deployed fontecoffee.com with Node.js, React, SASS, Jest and AWS while leading UX.
- Retail profit up 24%, organic traffic up 19%, overhead down 30%.

EDUCATION & PROFESSIONAL DEVELOPMENT

Seattle University — Software Engineering coursework — PostgreSQL, Java, Spring Boot, Microservices (GPA 3.8)

West Virginia University — Business Management, Communication, Project Management (GPA 3.8)

Training — General Assembly: Web Development, JavaScript, Ruby · Coursera: Cloud Native, C#, Python, Azure, AWS
